AIR JET SIEVING MACHINE

The air jet sieving machines are used for particle test separation. Measuring range is included between 0.005 and 4 mm.

The machines have a polyurethane resin framework with an electronic power control provided of an operation time system and a vacuum indicator. The sieves are special and have a rubber joint.

The air jet sieving machine can be sold with the vacuum cleaner NILFISK GM 80. It is the most indicated machine to air jet sieving tests and it is able to create the decrease of pressure needed for the tests (since 20 KPa.).

Available model: **FTLBA**

INCLUDE:

- ▶ Air jet sieving machine.
- ▶ Line power cord.
- ▶ Methacrylate lid.
- ▶ Small plastic hammer.
- ▶ Operating instructions manual.
- ▶ CE declaration of conformity.
- ▶ Packing.

TECHNICAL CHARACTERISTICS				
FTLBA	220-240 V	50/60 Hz	0.019 kW	40 Kg
VACUUM MACHINE NILFISK GM 80	220-240 V	50/60 Hz	1.2 kW	5 Kg

Its working foundation is based on the use of air that tug thin particles to make them go through the sieve. This effect is made by a vacuum machine that provokes a controlled decrease of pressure.
